

Business Problem Statement

A retail company wants to understand customer shopping behaviour and purchasing patterns to improve revenue, customer satisfaction, and customer retention.

The company collects transactional data including customer demographics, purchase history, subscription status, discounts, product reviews, shipping preferences, and spending patterns. However, management lacks visibility into the factors influencing customer decisions and long-term loyalty.

This project aims to answer the following business question:

How can customer shopping data be leveraged to improve customer engagement, optimize marketing strategies, increase subscription adoption, and drive higher revenue?

Objectives

- Identify customer segments based on purchasing behavior.
- Analyze the impact of discounts on spending.
- Evaluate the effect of subscription programs on revenue.
- Understand product preferences and customer satisfaction.
- Measure the influence of shipping methods on purchase value.
- Generate actionable business recommendations using data-driven insights.

Expected Outcomes

- Improved customer targeting.
- Increased subscription adoption.
- Better product positioning.
- Enhanced customer retention.
- Higher overall revenue generation.
